A company with tradition

Horpovel® GmbH is an owner-managed company with both tradition and future.

We have been dedicated to the production of cleaning agents since 1960. Today, a large number of specialists in the fields of application technology, production as well as administration and our own fleet of vehicles ensure the hygienic enjoyment of food.

We maintain close cooperation with plant manufacturers, such as ALPMA/ LTH Dresden, and have access to a Europe-wide network. Comprehensive advice, efficient solutions, responsible action – for us, these are essential components of successful business relationships.

Our speciality is flawless dairy products

Therefore, the manufacturing of effective products for cleaning and disinfection as well as individual cleaning process planning is in demand. Individual solutions for membrane cleaning are only available in cooperation with a strong network. That is why, as a specialist in the cleaning of membrane filtration systems, we rely on the cooperation with membrane manufacturer Koch Separation Solutions*.

The new and further development of cleaning chemicals and strategies for cleaning membrane filtration systems in the food industry as well as the op-

timisation of CIP systems and standard cleaning processes are among our core competences. We are driven by the implementation of a solution adapted to the respective application for resource-saving, effective and reproducible cleaning.

In addition to the further development of our own cleaning strategies with simulation of the process on a laboratory scale, new cleaning processes for membrane plants can also be tested in laboratory trials for their cleaning effectiveness and membrane compatibility. The main goal is to optimise the cost-benefit ratio of membrane systems.
